CANDIDATE’S DECLARATION

I, **Nelson Lobo**, student of Diploma in Computer Science and Engineering, bearing the Register No.: **573CS15024** of Jain Polytechnic Belagavi, hereby declare that I own full responsibility for the information, result and conclusion provided in this project work titled **“GoGreenCampus”**, submitted to the Board of Technical Examinations, Government of Karnataka, for the award of the Diploma in Computer Science and Engineering.

To the best of my knowledge, this project has not been submitted in part or fully elsewhere in any institution or organization for the award of my certificate/diploma/degree. I further declare that in case of any violation of intellectual property or rights and particulars declared, found at any stage, I, Nelson Lobo, as the candidate will be solely responsible for the same.

Date:

Place:

Signature of Candidate

Name: Nelson Lobo

Register No.: 573CS15024

PROJECT GUIDE CERTIFICATE

JAIN POLYTECHNIC BELAGAVI

Department of Computer Science and Engineering

BONAFIDE CERTIFICATE

Certified that this project report **“GoGreenCampus Android Application”** is the bonafide work of **“Nelson Lobo”** bearing Register Number **“573CS15024”** of this institution who carried out the project work under my supervision.

Dr. Vijay H. Kalmani
Guide

Mr. Chetan Patil
Head of Department

JAIN POLYTECHNIC BELAGAVI

19/1, Peeranwadi, Belagavi – 590014

Department of Computer Science and Engineering

CERTIFICATE

Certified that this project report titled “**GoGreenCampus**” is the bonafide work carried out by **Nelson Lobo, 573CS15024**, Sixth Semester, for the partial fulfillment of the Diploma in Computer Science and Engineering of the Board of Technical Examinations, Bengaluru, Government of Karnataka during the year 2015-2016. It is certified that all corrections and suggestions indicated for internal assessment have been incorporated in this report and one copy of it is being deposited in the library.

The project has been approved as it satisfies the academic requirements in respect of Project Work prescribed for the Diploma in Computer Science and Engineering.

It is further understood that by this certificate, the undersigned do not endorse or approve any statements made, opinions expressed or conclusions drawn therein, but approve the project only for the purpose for which it is submitted.

ACKNOWLEDGEMENT

“All experiences are an opportunity for us to learn and grow”

Gratitude takes three forms, “a feeling from the heart”, “an expression in words” and “giving in return”. It is our human bound duty to acknowledge the following personalities for their efforts in guiding us in the right direction. The sense of contentment and elation that accompanies the successful completion of our project and its report would be incomplete without mentioning the names of the people who helped us in accomplishing this.

First and foremost, we would like to extend our cordial regards and thanks to our principal, **Dr. Vijay H. Kalmani**, for providing a healthy learning environment in the college, which helped us in developing our skills and concentrating on the task at hand. We express a deep sense of gratitude to our Head of Department, **Mr. Chetan Patil** for his valuable guidance, cooperation and timely help. We would also like to express our heartfelt thanks to all the staff at the Department of Computer Science and Engineering for their valuable support.

It has been a fortune to associate with our guide, **Dr. Vijay H. Kalmani**, as our guide during the course of this project undertaken. He has been kind enough to help us all in the fronts of development of this project when we required his help and has been continuous source of inspiration. Hence, it is our bountiful duty to offer our gratefulness to him.

Nelson Lobo
Owais Shaikh

ABSTRACT

The aim of our project is to make an Android Application that takes some input about the waste that has been generated in a university, college or school campus and the amount of waste that has been treated throughout the month and time, process the data to find the ratio of waste generated to waste treated and represent it with the help of graphical, visual and textual information and to assign ranking to the institute on based on the LEED index and green rating given. This application monitors and keeps track of the amount of waste generated and recycled and find out ways to improve the quality of our environment by finding out efficient ways of waste treatment and encourages environmentally-friendly practices by creating a competitive, community-based ambience.

Chapter 1. Introduction

1.1 Background

Go Green Campus Waste Management (GGC) Android App is an easy to use Android application with interactive Graphical User Interface (GUI). This application can be used by Universities, Colleges and Schools to keep track record of the waste that is generated in the campus and the waste that is been treated. The information is represented in the form of text and graph.

More and more of us are realizing that our future depends on protecting the health and wellbeing of ourselves and our home planet, Earth. To do so, we must educate a new generations of citizens with the skills to solve the global environmental problems we face and to have a green future or a green economy with green universities, colleges, and schools and their campuses.

Mobile Applications have a unique model in order to provide top-quality customized solutions to such an issue and to big masses and price-ranges that are affordable. For example, according to available statistics, over 80% of startups today are actively looking into creating a mobile applications for such situations.

1.2 Motivation

Safeguarding the health of India's schoolchildren must be central to a high-quality education. Research shows that greener school environments can improve children's health and learning. Yet our institutes get dismal grades in environmental practices.

Schools use non-biodegradable and recyclable waste contain toxins, which are irreversible and dangerous to life forms on Earth. Poor indoor air quality, air pollution and low-visibility are linked to various health issues like soaring asthma and direct environmental impact. Most schools consume enormous quantities of paper and energy, produce tons of waste and carbon emissions, and rarely purchase environmentally-friendly products. Research shows that green schools save more money due to efficiency and affordability of materials, while improving employees and students' health. A 2006 LEED Green Building Council report showed that green schools cost ₹195 more per square meter, but generated ₹4800 per square meter in benefits from energy savings, increased attendance, and employee retention.

1.3 Problem Statement

The main objective of GoGreenCampus Android App is to provide users with an easy to use application with interactive GUI that can be used to monitor and keep track of waste generated and waste treated throughout the day in University/College/School Campus.

This information can be further used by the University/College/School Authority to enhance the waste treatment facility in the campus thus reducing the generation of waste and keeping the surrounding clean.

1.4 Objectives

- To develop an Android mobile application to simplify waste collection.
- To process and display precise data for evaluation and analysis and technical feasibility.
- To encourage institutes to reduce generation of waste and keep our surroundings clean.
- To instill a good attitude and a sense of pride and accomplishment for completing tasks related to recycling.

Chapter 2. System Survey

2.1 Survey of Existing Systems

Although there are applications that are used by people to file complaints about waste generated around us there is no application that keeps track of the amount of waste generated and treated and most of the applications that keep track are not much developed and they keep track of only the solid waste^[8]. This makes the development/enhancement of the waste treatment facility extremely difficult^[7]

2.2 Scope for Improvement

The application improves on current systems such as RoHS^[6] and LEED^[5] etc. by offering a completely digital and wireless solution for keeping track of and recording waste disposal and management, which directly affects the environmental quality of a campus/organization^[9].

2.3 Summary

Waste management is among the basic essential services needed to keep campuses green. Due to industrialization, rural to urban migration and high growth rate of population have induced rapid urbanization in developing countries and obviously in India as well^[7]. The haphazard urbanization created acute problem for waste management. Waste generation rate in India has increased from 0.44 kg per day in 2001 to 0.5 kg per day in 2011^[8]; such a steep increase in waste generation within a decade has severed the stress on all infrastructural, natural and budgetary resources^[7]. So, there is a need for proper waste collection, segregation and processing. The proposed work emphasizes on the use of technology and mobile systems in making a sustainable urban environment.

2.4 Proposed System

The proposed system can keep record of the waste that is been generated and the amount of that waste that is actually been treated. This can be applied to both solid waste as well as liquid waste. The GoGreenCampus Application processes the data and represents the data in both text as well as graphical form. It makes use of easy to use user-friendly Graphical User Interface (GUI) for the user to interact with the application.

Chapter 3. Requirements Specifications

3.1 Project Requirements Specification

Following are the hardware and software requirements to be met in order to use the proposed system:

3.1.1 Hardware Requirements

- Any ARM-based 64-bit Android device @ 768MHz or more
- Minimum 512MB of RAM
- Minimum 10MB of Internal Storage
- Connectivity to the Internet via WiFi or Cellular Data
- Android devices with 64-bit ARMv7 architecture (32-bit and Intel x86 unsupported)

3.1.2 Software Requirements

- Android 6.0 Marshmallow and above
- A PHP server
- System versions supporting Kotlin compatibility. (Android 6.0+)
- A MySQL Database
- Android XML Schemas

3.2 Functional Requirements

Functional requirements are the requirements of tasks, processes etc. essential to the system.

3.2.1 User Domain

- The users add data on waste to the application.
- The users can log into and delete their accounts.
- The users can delete specific entries from the server/database
- All users collectively affect the institute's performance

3.2.2 Institute Domain

- The institutes can add themselves on the database.
- The institute heads all the users of the campus.
- The institutes compete with each other to perform better in environmental sustainability.

3.3 **Non-Functional Requirements**

Non-functional requirements are requirements that are not compulsory, but add a nice feature to the application, such as UI Design, notifications, animations etc.

- Easy-to-use user interface design.
- Use of discrete components like cards and dynamic padding.
- Adding animations to give appeal.
- Notifying users of errors.

Chapter 4. Project Design

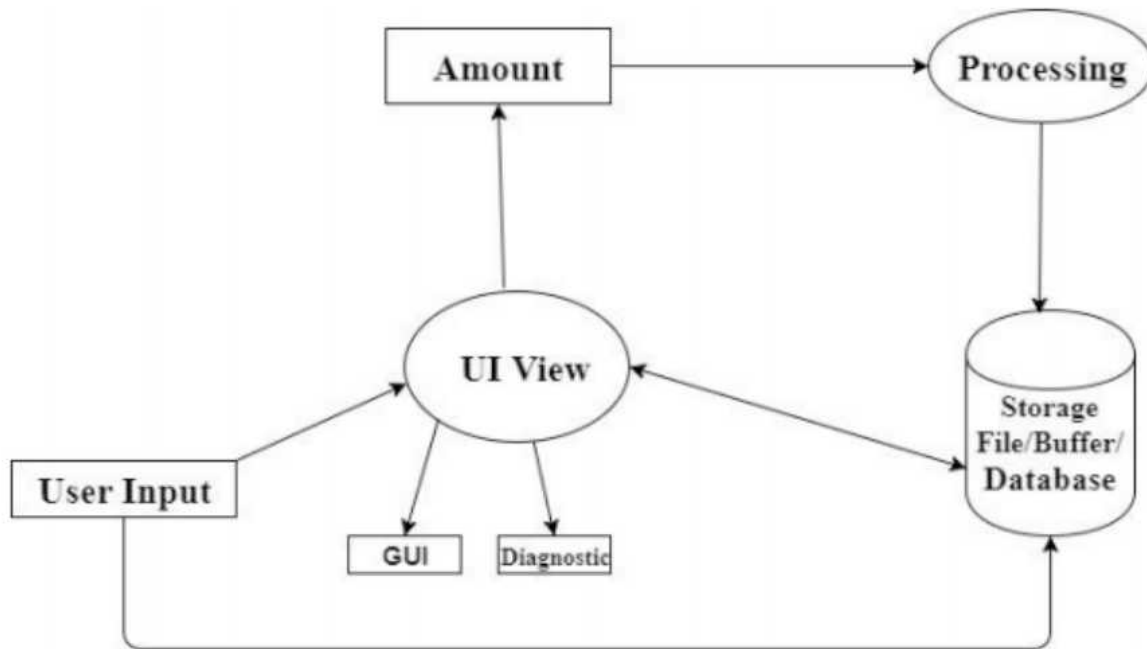

Fig. 4.1 Data Flow diagram

4.2 Entity Relationship (ER) Diagrams

Fig. 4.2 Entity-Relationship (ER) diagram

4.3 Use Case Diagrams

Fig. 4.3 Use Case diagram

Chapter 5. Implementation and Testing

5.1 Implementation Details

The implementation phase is the most important phase as it gets the final outcome of the project. It perfectly maps and materializes the project. The GoGreenCampus Application has two implemented parts:

5.1.1 Software Frontend

- The Software Frontend is a user-friendly Graphical User Interface(GUI).
- It supports native controls, has visible buttons and text boxes for the user to use the application easily.
- The Frontend of the is designed using Google's XML Framework for Android Applications.

5.1.2 Software Backend

- The Software Backend is the most important part of the application that consists of algorithms for processing of the data entered by the user.
- The Backend of the Application is designed using Kotlin which is a new, object-oriented programming language used to develop Android applications and a MySQL database for the storage and retrieval of data from a highly secure MySQL server.
- The server connections are established in the PHP programming language.
- The database is queried using Structured Query Language (SQL).

5.2 Modules

The implementation phase is the most important phase as it gets the final outcome of the project. It perfectly maps and materializes the project. The GoGreenCampus Application has three implemented parts:

5.2.1 Waste Segregation

Waste segregation is the process by which waste is separated into different elements. Waste sorting occurs automatically in the application and sent to the server. Data is added via the Add page and is segregated and stored on the database using PHP.

5.2.2 Data Processing and Calculation

Data processing includes the collection and manipulation of items of data to produce some data. It can be considered a subset of the module and uses specialized algorithms and statistical calculations. Data is processed programmatically in PHP and is calculated in Kotlin.

5.2.3 Graphing and Display

Graphing is a mathematical method used to model the data obtained from calculation of inputs. A graph in this context is made up of vertices and lines which are directly plotted from the obtained results from the server. Data is graphed using a library and is displayed using Kotlin

5.3 Application Activities and Programs

5.4 Test Cases

5.4.1 User Login Attempt

TEST CASE	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS
Checking login with valid credentials	Valid Username Valid Password Tap LOGIN	Toast notification saying “Welcome, ---”	Toast notification saying “Welcome, ---”	Pass
Checking login with invalid credentials	Invalid Username Invalid Password Tap LOGIN	Toast notification saying “Please check your info and try again”	Toast notification saying “Please check your info and try again”	Fail

5.4.2 Password Recovery Attempt

TEST CASE	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS
Attempting account recovery with valid credentials	Valid Email Valid Country code Valid Phone Tap LOGIN	Snackbar notification saying “Please check your email for recovery options”	Snackbar notification saying “Please check your email for recovery options”	Pass
Attempting account recovery with invalid credentials	Invalid Email Invalid Country code Invalid Phone Tap LOGIN	Toast notification saying “Please check your input and try again”	Toast notification saying “Please check your input and try again”	Fail

5.4.3 New User Registration

TEST CASE	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS
Registering for an account with valid information	Valid First Name Valid Last Name Valid Email Valid Username Valid Password Valid Institute Select Country Select State Select City	Toast notification saying “Account created successfully”	Toast notification saying “Account created successfully”	Pass
Registering for an account with a few invalid information	Valid First Name Valid Last Name Invalid Email Valid Username Valid Password Invalid Institute No Country Select State Select City	Toast notification saying “Please check the form and try again”	Toast notification saying “Please check the form and try again”	Fail

5.4.4 New Institute Registration

TEST CASE	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS
Registering an institute with valid information	Valid Institute Name Select Address Select Country Select State Select City Valid Area Valid Institute Code	Toast notification saying “Institute registered succefully”	Toast notification saying “Institute registered succefully”	Pass
Registering an institute with valid information	Invalid Institute Name Select Address No Country Select State Select City Invalid Area Valid Institute Code	Toast notification saying “Please check the form and try again”	Toast notification saying “Please check the form and try again”	Fail

5.4.5 Addition of Data

TEST CASE	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS
Addition of valid data	Any Waste Type Any Waste Convention Slider quantity Slider visibility Any Notes	Toast notification saying “Data added successfully”	Toast notification saying “Data added successfully”	Pass
Addition of random data	Any Waste Type Any Waste Convention Slider quantity Slider visibility Any Notes	Toast notification saying “Data added successfully”	Toast notification saying “Data added successfully”	Pass

5.4.6 Searching for Existing Data Entries

TEST CASE	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS
Enter data into search bar	Search string	Cards of data correlating with string	Cards of data correlating with string	Pass
Do not enter data into search bar	–	Blank fragment	Blank fragment	Pass

5.4.7 Checking connectivity to server and database during specific scenarios.

TEST CASE	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS
Disabling WiFi, Bluetooth, Cellular Data, Tethering	Invalid connection method	Toast notification saying “Could not establish a connection to the server”	Toast notification saying “Could not establish a connection to the server”	Fail
Powering off the all servers (Apache, MySQL)	Invalid server configuration	Toast notification saying “The server could not process your request”	Toast notification saying “The server could not process your request”	Fail

5.4.8 Application performance profile

Chapter 6. Screenshots

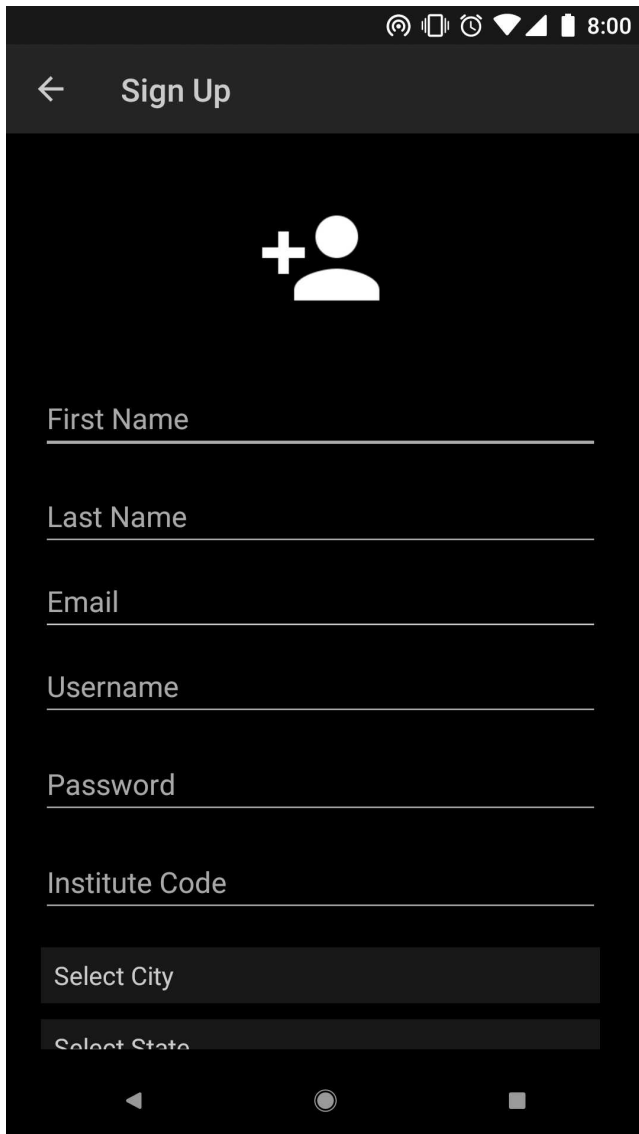

a) Login Activity

b) Forgot Password Activity

c) Sign Up Activity

A screenshot of a mobile application's 'Sign Up' screen. The screen has a dark background. At the top, there is a status bar with icons for signal, Wi-Fi, battery, and time (8:00). Below the status bar is a header bar with a back arrow and the text 'Sign Up'. In the center, there is a white icon of a person with a plus sign. Below the icon, there are several input fields: 'First Name', 'Last Name', 'Email', 'Username', 'Password', and 'Institute Code'. At the bottom, there are two more input fields labeled 'Select City' and 'Select State'.

d) Register Institute Activity

A screenshot of a mobile application's 'Register Institute' screen. The screen has a dark background. At the top, there is a status bar with icons for signal, Wi-Fi, battery, and time (8:00). Below the status bar is a header bar with a back arrow and the text 'Register Institute'. In the center, there is a white icon of a building with a plus sign. Below the icon, there are several input fields: 'Institute Name', 'Address (Street, Area etc.)', 'Select Country', 'Select State', 'Select City', 'Campus Area (in km²)', and 'Institute Code'. At the bottom, there is a button labeled 'REGISTER YOUR INSITUTE'.

Chapter 7. Advantages

- **Free and Open Source:** This application is free to use, copy, modify and distribute under the GNU Public License (GPL). It is made using completely free and open source (FOSS) software, including Android frameworks, Apache, PHP, MySQL and open-source libraries such as Volley and GraphView.
- **Easy to use:** This application provides a familiar and easy-to-use Graphical User Interface (GUI) and visual representation of data in the form of a graph.
- **Portable:** This application can run on most Android devices available on the market and can be wirelessly accessed.
- **Sustainable:** Reduces waste by not needing pen and paper
- **Precise Data Logging:** We use internationally accepted rating systems, such as the Leadership for Environmental and Economic Development (LEED).
- **Community-oriented:** The intent is to provide users with a sense of pride and accomplishment for completing different goals and creating a competitive atmosphere.

Chapter 8. Applications

The applications for this project include:

- Integrating app usage data by educational institutions, organizations and campuses to raise awareness and for research purposes.
- Implementation by businesses, to manage waste in their work place and promote hygiene and sustainability in the workplace.
- Usage by the maintenance and janitorial services of housing societies, colonies, condominiums etc., for sanity measures and upkeep.
- Surveying and data collection by government and non-government organizations, for census, studies and survey.
- Usage by restaurants, hotels, diners, eateries for sanitation checks, resourcefulness and waste management.

Chapter 9. Further Scope and Enhancements

- Uploading application to the Google Play Store, F-Droid or other application repositories for ease-of-access.
- Integrating more metrics into the application for higher precision data, such as community ratings, engineering standards etc.
- High performance servers for low data-processing latency
- Adding external hardware support for devices such as mini wind vanes, dosimeters etc. or Internet of Things (IoT) support.

Chapter 10. Conclusion

Through use of technology and methods like mobile computing, continued efforts to reduce the use of hazardous materials, we have created a simple solution for the conservation of our environment via technology. This project raises awareness of our potential impact on our shared resources and, therefore, we need to claim responsibility to be a good environmental steward. As we continue to accelerate to the future, we need to minimize our impact on the environment.
